EXPERIENCE

Data Engineering Extern <i>Extern, in partnership with Breaking Games LLC (AdMagic)</i>	Jun 2026 – Aug 2026 <i>Remote</i>
- Designed a relational schema from six unconnected raw files, adding keys to join the customer journey from ad click to purchase. - Ranked a 117-product catalogue by revenue with joins, aggregations and subqueries to produce a holiday reorder recommendation. - Collapsed 421 messy referral strings into a channel taxonomy, tying \$37k of Meta ad spend to \$61k of attributed revenue for a Q4 plan. - Investigated 1,000+ abandoned checkouts, isolating bot traffic behind a reusable view to recalculate the true abandonment rate. - Delivered a denormalised reporting table and a Chart.js dashboard, presented as the sole technical contributor.	
Crew Member <i>McDonald's</i>	Mar 2024 – Present <i>Windsor, UK</i>
Serve 200+ customers per shift in peak season at a high-volume site against timed service targets; trained 3 new crew members.	

PROJECTS

Mcdonald's Clone Java 21, Spring Boot, Spring Security, PostgreSQL, AWS, Docker <i>Source: github.com/devMoxy/Mcd Online Ordering System</i>	2026
- Built a food ordering system with JWT auth, BCrypt hashing and role-based access control over 8 REST endpoints and a Flyway-versioned 5-table schema. - Deployed on AWS with a multi-stage Docker build: ECR, ECS Fargate behind an ALB, RDS PostgreSQL, S3 hosting and CloudWatch logs. - Replatformed to Fargate mid-project after AWS closed App Runner, debugging a stale task-definition digest and a missing security group rule. - Snapshotted menu prices onto order line items at purchase time, so later price changes cannot alter historical orders. - Enforced order status as a server-side state machine (PLACED to PREPARING to READY), rejecting invalid reversals.	
Moxy Football Quiz Java 21, Spring Boot, React, TypeScript, PostgreSQL, Docker <i>Live demo: football-quiz-front-end-ashen.vercel.app Source: github.com/devMoxy/Football-Quiz</i>	2026
- Built a three-mode football trivia platform with 18 REST endpoints, a 7-table schema and 500+ curated questions. - Diagnosed a 27x production duplication bug from live row counts dividing evenly by 27, tracing it to a non-idempotent startup seeder. - Found two shuffled lists still positionally correlated from being built in lockstep; fixed it behind a 200-trial regression test. - Designed the grid mode on a stateless backend, tracking triggering achievements separately from turn index to close an unwinnable-state edge case.	

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, SQL (PostgreSQL, SQLite), HTML/CSS
Frameworks: Spring Boot, Spring Security, Spring Data JPA, React, Vite, JUnit
Cloud & DevOps: AWS (ECS Fargate, ECR, RDS, S3, CloudWatch, IAM), Docker, GitHub Actions, Render, Vercel, Neon
Databases & Tools: PostgreSQL, Flyway, Hibernate, Maven, Git, Postman, Chart.js, Lombok

EDUCATION

University of the People <i>BSc Computer Science — part-time, remote</i>	In progress <i>Remote</i>
Slough and Langley College <i>BTEC Extended Diploma in IT — D*DD (equivalent to A*AA)</i>	Sep 2024 – Jun 2026 <i>Slough, UK</i>
